1. Executive Summary

The FX Trading Tracker is a web-based platform designed to streamline the management of foreign exchange deal tickets within a multi-role operational environment. The system replaces manual spreadsheet-based tracking with a structured, auditable workflow that connects traders, treasury processors, and administrators.

The platform supports the complete deal lifecycle from ticket creation through treasury confirmation, with built-in settlement proof management, comprehensive reporting, and full audit trail capabilities. It is designed for on-premise deployment with switchable database (MongoDB/Couchbase Enterprise) and storage (Emergent/S3-compatible/Huawei OBS) backends.

Figure 1.1 - FX Trading Tracker Dashboard

2. Business Objectives

- **Operational Efficiency** - Replace manual spreadsheet tracking with a structured deal ticket workflow reducing processing time by 60%.
- **Compliance & Auditability** - Provide a full audit trail of every action, settlement proof management, and role-based access controls.
- **Accuracy** - Eliminate data entry errors through structured forms, validation rules, and automated calculations.
- **Visibility** - Real-time dashboards, 8 report types, and CSV/PDF exports give management instant insight into trading operations.
- **Scalability** - Switchable database and storage backends enable on-premise deployment at enterprise scale.
- **Crypto Support** - Native crypto wallet addressing with blockchain network selection (SOLANA, ETHEREUM, TRON).

3. Stakeholders

Stakeholder	Role	Interest
FX Traders	Primary user	Create deal tickets, manage client proofs, track deal status
Treasury Team	Processor	Review, confirm/return deals, upload processor proofs
Operations Admin	Administrator	Manage users, reference data, reports, audit trail
System Admin	IT/DevOps	Database management, system exports, controlled reset
Management	Consumer	Reports, dashboards, volume analysis
Compliance/Audit	Auditor	Audit trail, transaction history, settlement proof review

4. Scope

4.1 In-Scope

- Multi-role authentication (Trader, Treasury, Admin, System Admin)
- Deal ticket creation with Buy/Sell transaction types
- 6 transfer types: FX Crypto, FX Local, FX Bank Deal, FX-Intercompany, FX - Corporate Settlement, PDAX Withdrawal
- Counterparty management for PJI Group entities
- Bank and crypto account management with CSV/Excel bulk import (including legacy fld_* format)
- Settlement proof upload/management (client and processor)
- Treasury confirmation workflow with return/resubmit cycle
- 8 report types with CSV/PDF export, admin-configurable permissions
- Full audit trail with action-level logging
- FX Client and bank account reference data management
- System administration (DB stats, exports, controlled reset)
- On-premise deployment readiness (switchable MongoDB/Couchbase, Emergent/S3 storage)

4.2 Out-of-Scope (Future)

- Email/SMS notifications
- Scheduled report delivery
- Approval workflow for TMS
- Real-time price feeds
- Mobile native app

5. Business Requirements

BR-001: Deal Ticket Management

The system shall enable authorized traders to create, view, and manage FX deal tickets with structured fields including client name, transaction type (Buy/Sell), transfer type, currency pair, amounts, rates, and bank/crypto account details.

BR-002: Treasury Processing Workflow

Treasury processors shall be able to review pending deals, upload settlement proofs, and confirm or return deals with mandatory remarks. At least one settlement proof must exist before confirmation is allowed.

Page 7

The screenshot displays the 'Deal Queue' section of the 'FX Tracker TRADING PLATFORM'. The interface includes a dark blue sidebar on the left with navigation links: 'Dashboard', 'Deal Queue' (highlighted), and 'Reports'. The top right corner shows the user 'Jane Treasury Treasury Ops' with a profile icon. The main content area is titled 'Deal Queue' with the subtitle 'Review and process FX deal tickets'. It features tabs for 'Pending (4)', 'Returned (0)', and 'Processed (0)'. Below the tabs is a table with columns: Reference, Client, Type, Pair, Amount, Rate, From Bank, To Bank, Deal Date, Last Action, and Action. The table contains four rows of deal data. Each row has a 'Review' button with an eye icon. The bottom of the sidebar contains the 'Jane Treasury Treasury Ops' logo and links for 'Change Password' and 'Logout'.

Reference	Client	Type	Pair	Amount	Rate	From Bank	To Bank	Deal Date	Last Action	Action
FX-20260803-0002	TEST_CRYPTQ_NET	Buy	USD/PHP	500 USD	56.5	-	-	15 Jan 2026	created	Review
FX-20260803-0001	TEST_CORP_SETTLE	Buy	USD/PHP	1,000 USD	56.5	BDO	BDO	15 Jan 2026	created	Review
FX-20260624-0002	TEST_INTERCO_CLIENT	Buy	USD/EUR	100,000 USD	56.5	JP Morgan Chase	JP Morgan Chase	15 Jan 2026	created	Review
FX-20260624-0001	Test Interco	Buy	USD/	10,000 USD	56	JPMC	Citi	24 Jun 2026	created	Review

Figure 5.2 - Treasury Deal Queue

BR-003: Settlement Proof Management

Both traders (client proofs) and treasury (processor proofs) shall be able to upload, view, and delete settlement proof documents (images, PDFs) associated with deals.

BR-004: Reference Data Management

Administrators shall manage FX clients, banks, bank accounts, counterparties, currencies, transaction types, and transfer types. Bulk import from CSV/Excel shall be supported for FX clients and bank accounts.

Figure 5.3 - Reference Data Management (FX Client tab)

BR-005: Reporting & Analytics

The system shall provide 8 pre-built reports (Deal Blotter, Settlement, Open Positions, Audit Trail, User Activity, Volume Summary, Client Activity, TMS/SAP) with server-side pagination, filterable date ranges, and CSV/PDF export capabilities.

Figure 5.4 - Reports Page

BR-006: Audit Trail

Every significant action (deal creation, status change, proof upload/deletion, user management, reference data changes) shall be logged with timestamp, user, action type, and details.

BR-007: Multi-Bank Account Import

The system shall support bulk import of bank accounts from CSV/Excel files in both simple (account_number, account_name) and legacy (fld_AccountNo, fld_BranchAddress, fld_BankCode) formats, with automatic bank matching/creation and persistence of extended fields (currency_code, account_type, bank_address).

6. Workflow & Process Flows

6.1 Deal Lifecycle Workflow

The deal follows a defined state machine:

Created → **Pending** → **Confirmed** (by Treasury)
Created → **Pending** → **Returned** (by Treasury) → **Edited/Resubmitted** → **Pending**
Created → **Pending** → **Cancelled** (by Trader)

State	Triggered By	Next States	Actions Available
Pending	Trader creates deal	Confirmed, Returned, Cancelled	Treasury: Review, Confirm, Return; Trader: Cancel
Confirmed	Treasury confirms	Terminal	View only, audit logged
Returned	Treasury returns	Pending (via resubmit)	Trader: Edit, Resubmit
Cancelled	Trader cancels	Terminal	View only, audit logged

6.2 Settlement Proof Workflow

1. Trader creates deal (optionally attaches client proofs).
2. Deal enters pending queue for Treasury.
3. Treasury reviews deal, uploads processor proofs.
4. Treasury confirms deal (requires >= 1 total proof) or returns with remarks.
5. If returned, Trader edits and resubmits.

6.3 FX-Intercompany Dual-Line Workflow

FX-Intercompany deals generate two settlement lines: .1 (Sell side) and .2 (Buy side), each with their own counterparty ours accounts. Both lines appear in Settlement and TMS reports.

7. Data Requirements

Entity	Key Fields	Source
Deal Ticket	Reference, Client, Type, Transfer Type, Currency Pair, Amount, Rate, Dates, Bank, Counterparty	Bank/Crypto Accounts, Network
FX Client	Name, Code, Type (Customer/Vendor)	Admin input or CSV import
Bank	Name, Code, SWIFT Code	Admin input or auto-created from import
Bank Account	Account Number, Name, Currency Code, Type, Bank Address, Contact	Admin input or CSV/Excel import
Counterparty	Name, Code (CLSC, PJ, Verite, etc.)	Admin input
Currency	Code, Name, Symbol, Type (fiat/stablecoin/crypto)	Seeded, admin-editable
Settlement Proof	File URL, Type (client/processor), Upload Timestamp	Trader/Treasury upload
Audit Log	Action, Entity, User, Timestamp, Details	System-generated

8. Non-Functional Requirements

Category	Requirement
Performance	Dashboard loads in < 2 seconds. Report pagination supports 10,000+ records.
Security	Role-based access control. JWT authentication. Password hashing (bcrypt). Audit logging.
Availability	On-premise deployment with hot-reload development. Supervisor-managed processes.
Scalability	Switchable MongoDB/Couchbase database backends. Switchable Emergent/S3 storage.
Maintainability	Modular architecture with database abstraction layer and storage abstraction.
Data Integrity	Foreign key relationships via application logic. Duplicate detection on imports.
Browser Support	Modern browsers (Chrome, Firefox, Safari, Edge). Responsive design.

9. Assumptions & Constraints

Assumptions

- Users have modern web browsers with JavaScript enabled.
- Network connectivity between browser and application server is reliable.
- On-premise deployment will provide necessary infrastructure (servers, database, storage).
- Bank account data in legacy format follows the fld_* column naming convention.

Constraints

- The system does not provide real-time FX rate feeds — rates are manually entered per deal.
- Settlement proofs are limited to images (JPEG, PNG, WebP, GIF) and PDFs, max 10MB per file.
- The approval workflow for TMS Approver field is not yet implemented.
- Email/SMS notifications are not currently available.

10. Acceptance Criteria

ID	Criteria	Validation
AC-01	Trader can create a deal ticket with all required fields	Deal appears in pending queue
AC-02	Treasury can confirm/return deals with mandatory remarks	Status changes, audit logged
AC-03	Settlement proofs can be uploaded and viewed	Files stored, displayed in deal detail
AC-04	Admin can import 1000+ bank accounts via CSV	Accounts created, duplicates skipped
AC-05	Reports generate with correct data and export to CSV/PDF	Data matches, files download
AC-06	Audit trail captures all significant actions	Actions logged with correct metadata
AC-07	System admin can reset database retaining users/ref data	Deals cleared, users retained

11. Glossary

Term	Definition
Deal Ticket	An FX trade record with client, currency, amount, rate, and account details
Settlement Proof	Documentary evidence of fund transfer (image or PDF)
Counterparty	PJL Group entity (CLSC, PJ, Verite) used in FX Local/Intercompany deals
Transfer Type	Classification of the FX transaction (FX Crypto, FX Local, FX Bank Deal, etc.)
TMS	Treasury Management System — SAP-compatible export format
FX-Intercompany	Transfer between PJL Group entities generating dual settlement lines
Crypto Network	Blockchain network (SOLANA, ETHEREUM, TRON) for crypto transactions
